

UNION MEMORIAL SCHOOL – NEW PARKING LOT/TRAFFIC FLOW DESIGN

We are trying a new parking lot/traffic flow design to help keep the students safe and expedite flow of traffic for those parents who drop off and pick up their child(ren). Essentially, the main parking lot will now be for cars only and the area directly in front of the main entrance will be for buses only. As a result, drivers will not have to wait for a bus driver to turn off his or her red lights. We will try this new design for several weeks. If it is successful, a permanent island will be placed where the orange cones (black triangle in the diagram) are currently located. Finally, we are asking that parents not park in the paved area between the school and the fire station. As always, please see Chris if you have any questions.
